

We would like to express our support for the XM RAdio instant traffic and weather. We use this primarily when we are traveling. Our experience with local stations is that we usually are traveling too fast through areas, or reception is poor and we are unable to get the critical information that we need.

XM Radio is offering a public service that is greatly needed for the safety and security of today's travelers. It certainly does not replace local radio, but enhances the ability of Americans to travel more easily and efficiently. Especially in today's uncertain world of high level terrorist alerts, etc., we need a way to getting information when we are out of range of local stations.

Sharon and Gary Stankoven
